Further directions
a belt that brings each block to the arm and stops
the ROS 2 workspace run on the real arm
motion planned with MoveIt in place of fixed sequences
OpenCV that sizes each block from above
sorting accuracy and cycle time measured over many blocks
grasping where the camera sees the block
an arm that picks the block and sets it down in the place for its size
block size in millimetres, from a calibrated camera
sorting by colour and shape as well as size
